

# INSY – AU09 – MUSIKARCHIV 2020

Phillip Przidal  
TGM HIT

## GIT REPOSITORY

Ich empfehle ihnen sich die Skripten und das Programm über GitHub anzusehen. Das ist einfach lesbarer als in diesem PDF. Ich habe ein kleines Java-Programm geschrieben welches von einer gegebenen discogs-URL die Song-Titel, Song-Länge und Tracknummer in SQL Inserts für unsere Tabellenstruktur bringt.

[Link](#)

## DDL

Als erstes musste man das DDL Skript vervollständigen. Hier war nur die Tabelle album & interpret gegeben. Man hatte allerdings schon das RM gegeben.

```
DROP DATABASE IF EXISTS musikarchiv2020;
CREATE DATABASE musikarchiv2020;
USE musikarchiv2020;

-- DROP TABLE IF EXISTS interpret; eig. sollte man diesen Befehl nicht
-- benötigen wenn man schon die ganze DB verwirft
CREATE TABLE interpret (
    iname          VARCHAR(100),      -- z.B. 'Presley, Elvis'  aber:
    'Pink Floyd'
    inameanz       VARCHAR(100),      -- z.B. 'Elvis Presley'
    'Pink Floyd'
    wikipedia      VARCHAR(200),
    PRIMARY KEY (iname)
) ENGINE=INNODB;
